

Printing from a local device

The printer is connected with a local device. This could be a PC based Point of Sale System or a Tablet which is communicating with the on-line ordering service server. The local device sends the order to the printer. This can be achieved with a USB, Lightning USB, Ethernet, Wireless Ethernet or Bluetooth Printer.

A hard-wired solution such as Ethernet or SteadyLAN provides the most robust solution.

star PassPRNT

PassPRNT is ideal for quickly adding printing support with status to any standard or Progressive Web Application and resolves issues typically associated with printing from Web Based solutions including page setup, margins, headers & footers.

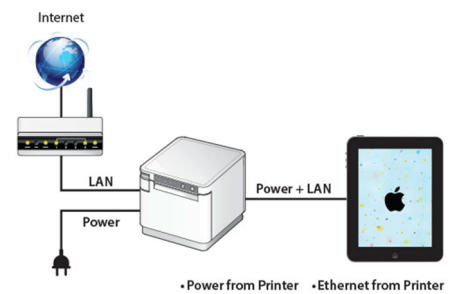

star webPRNT

Removes the issues usually associated with web-based printing by offering driverless printing capabilities for all receipt data, utilising HTML and JavaScript standards to provide consistent browser printing. Available on all CloudPRNT Printers as well as WebPRNT Browser Software for use on Star Bluetooth Printers.

SteadyLAN for iOS

With SteadyLAN deliver a hardwired Ethernet connection to your iPad. No more WiFi. Available on mC-Print series.

Printing Directly from a Central Server to the Printer

With Star CloudPRNT the printer communicates with a local or cloud based server directly. Order printing no longer dependent on tablet, it is now optional. If tablet fails orders will still print. Greater flexibility in placement of tablet and printer. CloudPRNT offers simple print job queue management and printer control of scanner and display if required, without a need for a tablet. CloudPRNT is simple to integrate, platform independent and compatible with top industry on-line ordering and scheduling applications. Star Micronics also offers a free Star CloudPRNT plug-in for WooCommerce.

PRINTERS COMPATIBLE WITH STAR TECHNOLOGIES

SM-L200*

Mobile Receipt and Label Printer

WORKS WITH:

INTERFACES:
