

Food Labelling Solutions

Precision printing for accurate service

Date Labelling - Allergen Labelling - Ingredients Labelling- Stock Rotation Labelling
Food Delivery Labelling - QSR Food and Beverage labelling - Nutrition Labelling

star

Food Ordering and Preparation

Built for fast-paced food preparation and QSR environments, Star's all-in-one label printers offer efficient, high quality performance. Print customer food orders, tray labels, delivery labels and bag seals all from the same printer.

Food and Drinks Ordering

Accurate Order Identification

Star label printers print on standard thermal paper as well as linerless sticky labels which attach to food trays and food packaging throughout the preparation process for increased accuracy.

One-Handed Operation

With no backing paper to peel off, linerless labels allow staff to label food packaging without breaking their workflow.

Smart Order Queuing

Star printers feature an integrated **Paper Taken Sensor** as standard. The printer intelligently queues incoming orders, only printing the next label once the previous one has been taken.

Delivery and Collection

Paper-Saving

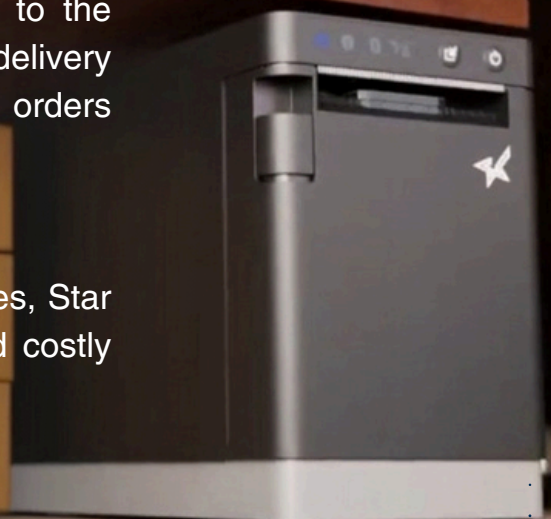

Variable length linerless labels automatically adjust to the order. Long orders, special modifications and delivery addresses are easily accommodated, while shorter orders print on smaller labels to save paper.

Zero mistakes

Delivering sharp text and perfectly scannable barcodes, Star printers eliminate errors, avoiding order mix-ups and costly remakes.

Re-useable packaging

Star linerless labels can even stick to customers' own (BYO) drinks or food containers for order identification and are simply removed with no residue.

Food Safety Labelling

IP rated and engineered for kitchen use, Star printers print clear and accurate stock rotation labels, date labels, allergen and ingredients labels for HACCP compliance. Printing on both traditional die cut labels and linerless media, Star printers integrate seamlessly with network, tablet and cloud systems.

Stock Rotation

Consistent labelling

High resolution printing ensures clear and compliant stock and date labelling. This helps to eliminate human error from handwritten labels.

Printer models designed for both die cut and linerless labels from 25mm to 80mm wide provide versatility for future changes in food labelling systems.

Food Retail and PPDS

Star printers print clear and compliant use by, sell by, nutrition, ingredient and allergen labels, on pre-packed for direct sale (PPDS) and to-go food.

High resolution logos, graphics, barcodes and QR codes enhance branding with no messy or costly toner or cartridges to change - just thermal label rolls.

Star's unique compact, front opening printers are designed for small counter spaces and print from PC, network, tablet or cloud systems.

Connect from anywhere

Not just a label printer! Every Star product reflects four decades of development, experience and refinement engineered into every solution. From hardware innovations to cloud enabled device management, you can be sure every Star product meets the demands of today's hospitality businesses.
